

# Creating a Video of Your Presentation Using OBS and Windows Movie Maker

ANDREAS LÖCKEN, Technische Hochschule Ingolstadt, Germany

This video gives basic instructions on how to record a presentation and was initially intended for the students of the class “Beyond the Screen – Unexploited Modalities for Human-Computer Interaction (HCI)” at the Technische Hochschule Ingolstadt.

The video explains how to use OBS<sup>1</sup> to record the screen and overlay it with a video from a webcam. Windows Movie Maker is used to cut it, although Shotcut<sup>2</sup> or any other software may be less outdated.

It may be interesting for other people who have to record presentations from home, too.

## 1 URL

The video is online at YouTube (see <https://youtu.be/wKYgc2--aP8>) and can be downloaded in full resolution from this URL: [http://www.loecken.eu/share/video/HowTo\\_SimpleVideo\\_small.mp4](http://www.loecken.eu/share/video/HowTo_SimpleVideo_small.mp4). *One thing to note: use Handbrake<sup>3</sup> to convert your file to mp4 and optimize file size before uploading.*
